Consider the following code snippet.

```
@app.route('/user/<username>')
def profile(username):
    # CODE BLOCK HERE
```

Assume the database has a "User" table which has a TEXT column "username". If we want the server to return a 404 status code when a user goes to the route '/user/<username>' with a username that does not exist in the database, which of the following lines would give us the desired output?

Options :

6406531891920. ✓

```
user = User.query.filter_by(username=username).first()
if user is None:
    abort(404)
return render_template('profile.html', user=user)
```

6406531891921. ✘

```
user = User.query.filter_by(username=username).first()
if user is None:
    return render_template("404.html")
return render_template('profile.html', user=user)
```

6406531891922. ✔

```
user = User.query.filter_by(username=username).first_or_404()
return render_template('profile.html', user=user)
```

6406531891923. ✔

```
user = User.query.filter_by(username=username).first()
if user is None:
    return render_template("404.html"), 404
return render_template('profile.html', user=user)
```

Correct Marks : 3

Question Label : Multiple Choice Question

Read the following statements regarding web accessibility principles and choose the correct option.

Statement 1: The command `git merge <branch_name>` merges all the change done to currently active branch.

Statement 2: The command `git merge <branch_name>` merges all the change done to master branch.

Options :

6406531892036. ✘ Both statement 1 and statement 2 are correct

6406531892037. ✘ Both statement 1 and statement 2 are incorrect

6406531892038. ✔ Statement 1 is correct but statement 2 is incorrect

6406531892039. ✘ Statement 1 is incorrect but statement 2 is correct

Question Label : Multiple Choice Question

Consider a function remainder, and a set of test cases given below.

Filename: test_file.py

```
def remainder(numerator, denominator):
    rem = numerator % denominator
    return rem

def test_func0():
    assert remainder(5,7) == 5

def test_function1():
    assert remainder(20,4) == 3

def test_func2():
    assert remainder(31,8) == 6

def test_function3():
    assert remainder(2,3) == 2
```

What will be the output on the terminal for the command `pytest test_file.py -k func` ?

Question Label : Multiple Choice Question

Consider the following models Library and Book corresponding to tables library and book in SQLite database.

```
class Library(db.Model):
    id = db.Column(db.Integer(), primary_key = True)
    name = db.Column(db.String(), unique = True)

class Book(db.Model):
    id = db.Column(db.Integer(), primary_key = True)
    name = db.Column(db.String(), unique = True)
    library = db.Column(db.Integer(), unique = True, db.ForeignKey("library.id"))
```

Based on the model schemas, what relationship do the classes Library and Book share?

Options :

6406531891944. ✘ Many-to-Many

Consider the `` element and the styling given to it in `<style>` tag using element selector in the HTML file below.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Span</title>
  <style>
    span{
      color: red;
      border:1px solid blue;
    }
  </style>
</head>
<body>
  <span id="this_span">Hello Students! MAD-I welcomes you!
</span>
</body>
</html>
```

What will be the final style applied to `` tag if an additional style is added via the ID selector given below?

```
#this_span{
  width: 1200px;
  border: 2px solid pink;
}
```

Software packages A and B of complexity $O(n^2 \log n)$ and $O(n^3)$, respectively, spend exactly $T_A(n) = C_A n^2 \log_{10}(n)$ and $T_B(n) = C_B n^3$ milliseconds to process n data items. During a test, the average time of processing $n = 10^5$ data items with the package A and B is 600 milliseconds and 300 milliseconds, respectively. Which of two software packages defined above will work better to process 10^6 data items?

Options :

6406531891980. ✓ Software package A

6406531891981. ✗ Software package B

6406531891982. ✗ Both Software packages A and B will take same time to process 10^6 items

6406531891983. ✗ Both Software packages A and B will take infinitely long time to process 10^6 items

A client machine C is 12000 kms away from the server machine S.
A router R is situated somewhere in between the client C and the server S and is connected to client C with cable and makes aerial connection with the server S. [Assume: The speed of light on cable is 1.5×10^8 m/s and in air is 3×10^8 m/s. The client, server and the router lie on a straight line]

Based on the above data, answer the given subquestions.
